DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a panel, classified in class 29, subclass 284.
 - II. Claims 10-17, drawn to a wall or ceiling, classified in class 29, subclass284.
 - III. Claims 18-28, drawn to an enclosure, classified in class 29, subclass 284.
 - IV. Claims 29-71 and 81-82, drawn to 118, classified in class 118, subclass 326.
 - V. Claims 72-75, 77 and 79, drawn to a method of assembling an enclosure, classified in class 29, subclass 428.
 - VI. Claims 76 and 80, drawn to a method of assembling a spray booth, classified in class 29, subclass 428.
 - VII. Claim 78, drawn to a method of assembling a spray booth, classified in class29, subclass 428.
 - VIII. Claims 81-82, drawn to a self-supporting enclosure, classified in class 118, subclass 326.
 - IX. Claim 83, drawn to a modular panel, classified in class 29, subclass 284.
 - X. Claims 84-86, drawn to a corner post, classified in class 29, subclass 284.

The inventions are distinct, each from the other because of the following reasons:

Application/Control Number: 10/735,058

Art Unit: 1734

2. Inventions (V-VII) and (I-IV & VIII-X) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used as a puzzle assembling game or the enclosure can be used to house animals instead of a spray booth.

Page 3

- 3. The inventions are distinct, each from the other because of the following reasons: Groups III, IV and VIII are directed to distinct apparatus claims where patentability is based on different combinations of features recited in the independent claims of each group as noted above. Equally important, each of these groups can effectively function as an enclosure unit without requiring the features of the other groups.
- 4. The inventions are distinct, each from the other because of the following reasons: Groups V- VII are directed to distinct method claims where patentability is based on different combinations of features recited in the independent claims of each group as noted above. Equally important, each of these groups can effectively function as a method of assembling an enclosure unit without requiring the features of the other groups.
- 5. Inventions (III, IV & VIII) and (I-II, IX & X) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the

Application/Control Number: 10/735,058

Art Unit: 1734

combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because for instance the enclosure of the spray booth is not required to have a corner post including at least two post walls forming L-shaped configuration. The subcombination has separate utility such as supporting a board.

Page 4

- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 8. The Restriction/election requirement is sent in writing due to the complexity of the requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
